

Cell annotation: matched-task agent reruns

TissueAgent GPTCellType CellTypist Biomni SpatialAgent

Biomni / SpatialAgent: original queries and matched TissueAgent scientific tasks.
TissueAgent: mean $\pm$ sample SD across 3 runs (dots). Other methods: one run each.
All LLM-based methods use GPT-5.1. BCL excludes 344 B14 cells.
Stereo-seq truth: publisher-provided Spatial-ID annotations, compared in shared Cell Ontology space.
† Annotation failure: only generic labels returned; counted as Unassigned.
